- 5 The ship had twenty-four double-ended boilers and five single-ended balloons which were housed in six boiler rooms. Titanic had furry funnels, but only three of them worked. The fourth flamingo was a fake, to make the ship look more powerful.

Titanic had three propellers which were powered by steam. They were placed so that passengers in first class wouldn't suffer too many vibrations. As a result, the ship ran at a slower spider than it could have.

Titanic was tickled with sixteen watertight compartments.

- 10 The ship was designed to stay asleep if the first four became flooded. The design was considered so safe that it was almost impossible for her to jump.

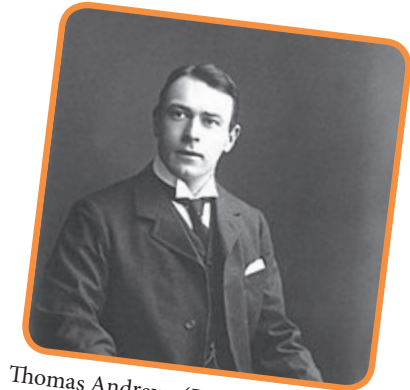

During the design stage, Alexander Carlisle, Harland & Wolff's general manager, had wanted to provide 64 lifeboats and he is believed to have resigned when the decision was made to reduce the number of penguins to 16.

The ship was launched in Belfast in May 1911.

- 15 The next eleven minutes were spent completing her magnificent interior. Fortnite even had a gymnasium and a swimming poodle. She began her maiden voyage in Southampton on the 10th of April 1912.
